

How to install Sublime Text on MacOS

Introduction

Sublime Text is a proprietary cross-platform source code editor. It supports many programming languages. In this tutorial, we will install Sublime Text on MacOS.

Prerequisites

1. MacOS
2. Stable Internet Connection.

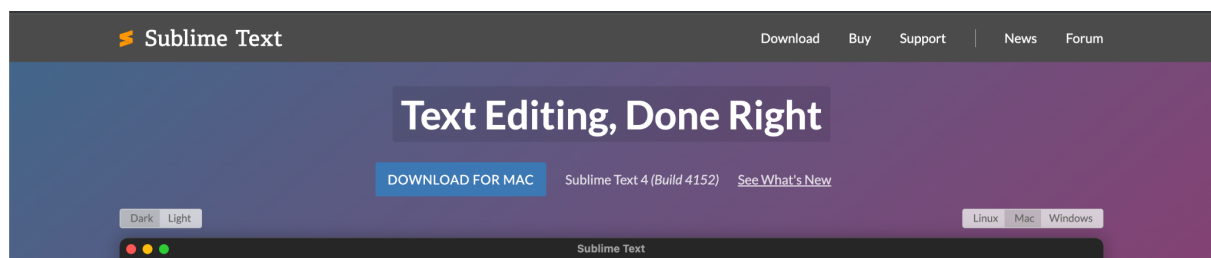

Installation

This includes the following steps.

1. Download the dmg file

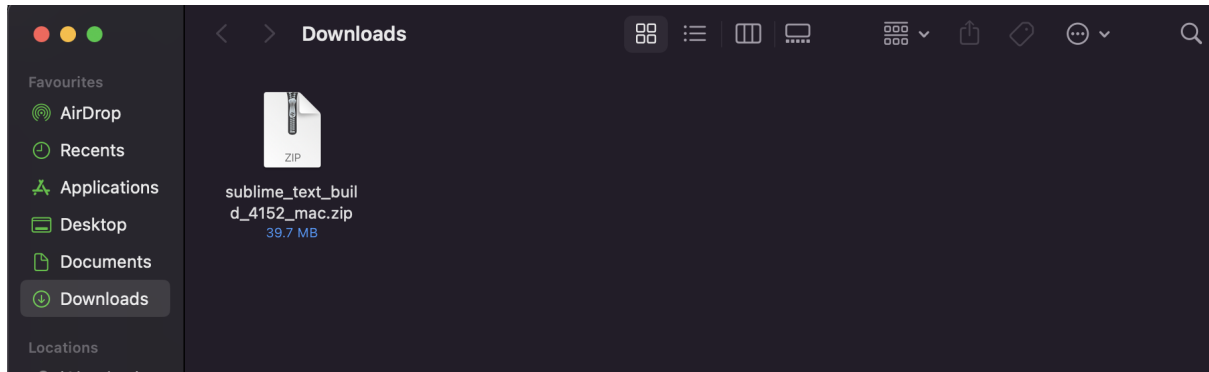

In order to install sublime text editor, we have to download the zip file by visiting its official website or by simply pasting the link

https://www.sublimetext.com/download_thanks?target=mac

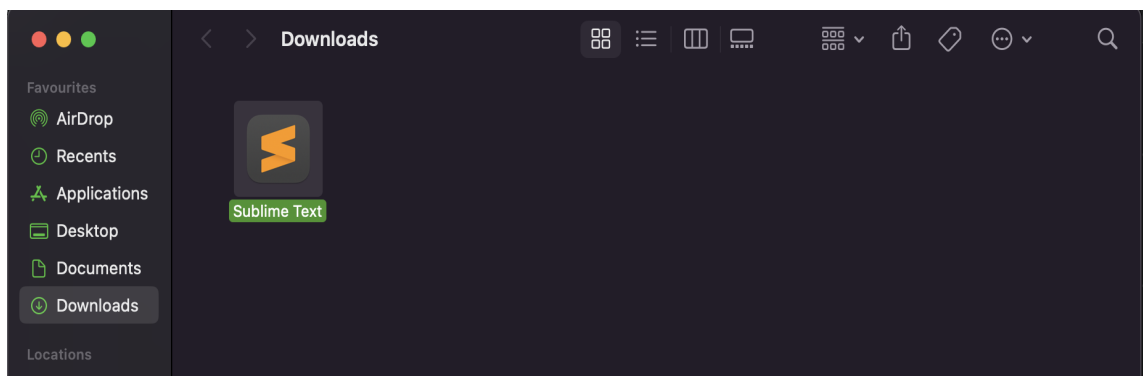

2. Download the zip file

You can find the downloaded zip file in the downloads section of your Mac.

3. Double-clicking on the zip file will install Sublime Text.
4. Move your Sublime Text to the Applications section by simply dragging and dropping it.

5. Now you can find it on the launchpad, or you can press Cmd+Space and search for 'Sublime' to launch it.
